OBJECTIVE

B.Tech CSE student with strong fundamentals in Data Structures, Algorithms, and backend systems. Interested in building scalable, user-facing software and infrastructure-driven products. Seeking a Software Engineering Internship to contribute to high-impact systems while learning industry-grade engineering practices in a collaborative environment.

TECHNICAL SKILLS

Programming Languages: C, C++, Python, JavaScript, SQL

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems (Basics), Debugging

Backend & Web: FastAPI, REST APIs, HTML, CSS, Tailwind CSS

Databases: MySQL, MongoDB

Tools & Platforms: Git, GitHub, VS Code

AI Exposure: Applied Generative AI (Gemini API), basic supervised machine learning, model evaluation and prompt design

Deployment: Backend deployment on Railway, frontend hosting on Vercel, environment configuration

PROJECTS

MediLens – AI Health Report Analyzer

[GitHub]

Tech Stack: React, FastAPI, Python, OCR, Gemini API, Tailwind CSS

- Designed and implemented backend services to process and analyze medical report PDFs using REST APIs.
- Built a conversational interface to answer user queries based on extracted report data with validated AI responses.
- Implemented secure authentication using JWT, Argon2 password hashing, MongoDB, and protected API routes.
- Added report history and comparison features to identify trends across multiple medical reports.

Crime Prediction and Analysis System (Minor Project)

[GitHub] [Live Demo]

Tech Stack: Python, Pandas, NumPy, Scikit-learn, Streamlit, Matplotlib, Folium

- Developed a supervised machine learning pipeline to analyze historical crime data and identify patterns.
- Performed data preprocessing, exploratory data analysis, and train-test splitting for evaluation.
- Built an interactive Streamlit dashboard with filtering and geographic crime hotspot visualization.

Metro System Simulator

[GitHub]

Tech Stack: C++, OOP, Graph Algorithms, Data Structures

- Developed a console-based metro transit simulation using object-oriented design principles.
- Implemented shortest path routing using Dijkstra's algorithm and BFS traversal.
- Added features such as user authentication, metro card management, fare calculation, and station utilities.

CODING PROFILES

LeetCode — CodeChef

TECHNICAL COURSEWORK

Data Structures & Algorithms, Operating Systems, DBMS, Object-Oriented Programming, Software Engineering

EDUCATION

Jaypee Institute of Information Technology, Noida

2023 – 2027

B.Tech in Computer Science

CGPA: 8.8/10

Sanatan Dharam Vidya Mandir, Panipat

Class 12: 96.17% (2023)

Class 10: 96.5% (2021)

ACHIEVEMENTS & LEADERSHIP

- Solved 170+ Data Structures and Algorithms problems on LeetCode; regular participant in coding contests.
- Open Source Contributor (GSSoC) and IEEE JIIT Volunteer..
